

# CONTENTS

<b>Introduction</b>	<b>i</b>
<b>Symbols and Abbreviations</b>	<b>v</b>
<b>1 Setting the Stage</b>	<b>1</b>
1.1 Problems With Ill-Conditioned Matrices . . . . .	1
1.2 Ill-Posed and Inverse Problems . . . . .	4
1.2.1 The Singular Value Expansion . . . . .	6
1.2.2 The Smoothing Property of the Kernel . . . . .	8
1.2.3 The Picard Condition and the Instability of the Solution . . . . .	8
1.3 Prelude to Regularization . . . . .	10
1.4 Four Test Problems . . . . .	13
1.4.1 Signal Processing: Sinusoids in Noise . . . . .	13
1.4.2 Computation of the Second Derivative ( <i>deriv2</i> ) . . . . .	14
1.4.3 One-Dimensional Image Restoration Model ( <i>shaw</i> ) . . . . .	15
1.4.4 A Problem With a Discontinuous Solution ( <i>wing</i> ) . . . . .	16
<b>2 Decompositions and Other Tools</b>	<b>17</b>
2.1 Singular Value Decompositions . . . . .	17
2.1.1 The (Ordinary) Singular Value Decomposition . . . . .	17
2.1.2 The Generalized Singular Value Decomposition . . . . .	20
2.1.3 What the <i>SVD</i> and <i>GSVD</i> Look Like . . . . .	23
2.1.4 Other Singular Value Decompositions . . . . .	25
2.1.5 Algorithms and Software . . . . .	27
2.2 Rank-Revealing Decompositions . . . . .	27
2.2.1 Rank-Revealing <i>QR</i> and <i>LU</i> Decompositions . . . . .	29
2.2.2 Rank-Revealing <i>URV</i> and <i>ULV</i> Decompositions . . . . .	31
2.2.3 What <i>RRQR</i> and <i>URV</i> Decompositions Look Like . . . . .	33
2.2.4 Generalized Rank-Revealing Decompositions . . . . .	34
2.2.5 Algorithms and Software . . . . .	35
2.3 Transformation to Standard Form . . . . .	35
2.3.1 Explicit Transformation . . . . .	37
2.3.2 Implicit Transformation . . . . .	38
2.3.3 <i>GSVD</i> Computations Based on Standard-Form Transformation . . . . .	40
2.4 Computation of the Singular Value Expansion . . . . .	40

<b>3</b>	<b>Methods for Rank Deficient Problems</b>	<b>43</b>
3.1	Numerical Rank . . . . .	43
3.2	Truncated <i>SVD</i> and <i>GSVD</i> . . . . .	46
3.2.1	Rank-Deficient Systems of Equations . . . . .	46
3.2.2	Truncated Total Least Squares . . . . .	49
3.2.3	Matrix Approximations . . . . .	51
3.2.4	Perturbation Bounds . . . . .	54
3.3	Truncated Rank-Revealing Decompositions . . . . .	55
3.3.1	The Use of <i>RRQR</i> Decompositions . . . . .	56
3.3.2	The Use of <i>UTV</i> Decompositions . . . . .	58
3.4	Truncated Decompositions in Action . . . . .	60
3.4.1	Subset Selection by <i>SVD</i> and <i>RRQR</i> . . . . .	60
3.4.2	Minimum-Norm Solutions and Null Spaces by <i>SVD</i> and <i>UTV</i> . . . . .	61
3.4.3	Numerical Ranges by <i>SVD</i> and <i>GSVD</i> . . . . .	64
<b>4</b>	<b>Problems with Ill-Determined Rank</b>	<b>67</b>
4.1	Characteristics of Discrete Ill-Posed Problems . . . . .	67
4.2	Filter Factors . . . . .	69
4.3	Working with Seminorms . . . . .	72
4.4	The Resolution Matrix, Bias, and Variance . . . . .	75
4.5	The Discrete Picard Condition . . . . .	78
4.6	L-Curve Analysis . . . . .	80
4.7	Random Test Matrices for Regularization Methods . . . . .	85
4.8	The Analysis Tools in Action . . . . .	88
4.8.1	Standard-Form Regularization of <i>deriv2</i> and <i>shaw</i> . . . . .	88
4.8.2	General-Form Regularization of <i>deriv2</i> and <i>wing</i> . . . . .	92
4.8.3	The Importance of the Relative Decay Rate . . . . .	94
<b>5</b>	<b>Direct Regularization Methods</b>	<b>99</b>
5.1	Tikhonov Regularization . . . . .	99
5.1.1	Formulations and Algorithms . . . . .	99
5.1.2	Perturbation Bounds . . . . .	103
5.1.3	Least Squares with a Quadratic Constraint . . . . .	104
5.1.4	Inequality Constraints . . . . .	105
5.1.5	Related Methods . . . . .	106
5.2	The Regularized General Gauss-Markov Linear Model . . . . .	108
5.3	Truncated <i>SVD</i> and <i>GSVD</i> Again . . . . .	108
5.4	Algorithms Based on Total Least Squares . . . . .	112
5.4.1	Truncated <i>TLS</i> Again . . . . .	112
5.4.2	Regularized <i>TLS</i> . . . . .	114
5.5	Mollifier Methods . . . . .	115
5.5.1	The Target Function Method . . . . .	116
5.5.2	The Backus-Gilbert Method . . . . .	117
5.6	Other Direct Methods . . . . .	119

5.7	Characterization of Regularization Methods . . . . .	123
5.8	Direct Regularization Methods in Action . . . . .	125
5.8.1	A Geometric Perspective . . . . .	127
5.8.2	From Oversmoothing to Undersmoothing . . . . .	128
5.8.3	Six Direct Solutions to <i>shaw</i> . . . . .	128
5.8.4	The Backus-Gilbert Solution to <i>shaw</i> . . . . .	131
5.8.5	Discontinuous Solutions to <i>wing</i> . . . . .	132
<b>6</b>	<b>Iterative Regularization Methods</b>	<b>135</b>
6.1	Some Practicalities . . . . .	136
6.2	Classical Stationary Iterative Methods . . . . .	138
6.3	Regularizing Conjugate Gradient Iterations . . . . .	141
6.3.1	Implementation Issues . . . . .	142
6.3.2	The Regularizing Effects of <i>CG</i> Iterations . . . . .	144
6.4	Convergence Properties of Regularizing <i>CG</i> Iterations . . . . .	148
6.4.1	Convergence of the Ritz Values . . . . .	148
6.4.2	Convergence Rates for the <i>CG</i> Solution . . . . .	152
6.4.3	Filter Factors for the <i>CG</i> Solution . . . . .	154
6.5	The <i>LSQR</i> Algorithm in Finite Precision . . . . .	158
6.6	Hybrid Methods . . . . .	161
6.7	Iterative Regularization Methods in Action . . . . .	164
6.7.1	Error Histories . . . . .	164
6.7.2	Four Iterative Solutions to <i>shaw</i> . . . . .	165
6.7.3	Ritz Plots for Lanczos Bidiagonalization . . . . .	167
6.7.4	The Influence of Reorthogonalization in <i>LSQR</i> . . . . .	171
6.7.5	A Hybrid Method in Action . . . . .	172
<b>7</b>	<b>Parameter-Choice Methods</b>	<b>175</b>
7.1	Pragmatic Parameter Choice . . . . .	176
7.2	The Discrepancy Principle . . . . .	179
7.3	Methods Based on Error Estimation . . . . .	181
7.4	Generalized Cross-Validation . . . . .	183
7.5	The L-Curve Criterion . . . . .	187
7.5.1	Distinguishing Signal From Noise . . . . .	187
7.5.2	Computational Aspects . . . . .	189
7.5.3	Other Aspects . . . . .	192
7.6	Parameter-Choice Methods in Action . . . . .	192
7.7	Experimental Comparisons of the Methods . . . . .	196
7.7.1	Inverse Helioseismology . . . . .	198
7.7.2	Image Deblurring . . . . .	205
<b>8</b>	<b>Regularization Tools</b>	<b>209</b>
	<b>Bibliography</b>	<b>215</b>
